

PROCEEDINGS OF THE THIRD INTERNATIONAL
WORKSHOP ON MULTISTRATEGY LEARNING
(MSL-96)

Edited by

R. S. Michalski
J. Wnek

Harpers Ferry, WV, May 23-25, 1996.

MSL-96

*Proceedings of the Third
International Workshop on
Multistrategy Learning*

**May 23-25
Harpers Ferry, WV**

*Edited by Ryszard S. Michalski
and Janusz Wnek*

*Organized by the
Machine Learning and Inference Laboratory
George Mason University with the collaboration of
International Joint Conferences on Artificial Intelligence, Inc.*

*Sponsored by the
National Science Foundation
Office of Naval Research
American Association for Artificial Intelligence*

Proceedings of the Third International Workshop on
MULTISTRATEGY LEARNING
(MSL-96)

May 23-25, 1996
Harpers Ferry

Edited by Ryszard S. Michalski and Janusz Wnek

**Organized by Machine Learning and Inference Laboratory
at George Mason University with the collaboration of
International Joint Conferences on Artificial Intelligence, Inc.**

**Sponsored by the National Science Foundation, Office of Naval Research, and
American Association for Artificial Intelligence**

Organizing Committee

Ryszard S. Michalski, General Chairman
George Mason University

Janusz Wnek, Program Chairman
George Mason University

Program Committee

John Anderson, *Carnegie Mellon University*
Francesco Bergadano, *University of Torino*
Jaime Carbonell, *Carnegie Mellon University*
Hugo De Garis, *ATR, Kansai Science City*
Luc De Raedt, *Catholic University of Leuven*
Marie desJardains, *SRI International*
Diana Gordon, *Naval Research Laboratory*
Kenneth Haase, *Massachusetts Institute of Technology*
Heedong Ko, *Korea Institute of Technology*
Yves Kodratoff, *University of Paris-South*
Stan Matwin, *University of Ottawa*
Doug Medin, *Northwestern University*
Raymond Mooney, *University of Texas at Austin*
Stephen Muggleton, *Oxford University*
Michael Pazzani, *University of California at Irvine*
Ashwin Ram, *Georgia Institute of Technology*
Lorenza Saitta, *University of Torino*
Claude Sammut, *University of New South Wales*
Jude Shavlik, *University of Wisconsin*
Derek Sleeman, *University of Aberdeen*
Gheorghe Tecuci, *George Mason University and Romanian Academy*

Local Arrangements

Abhay Kasera
George Mason University

Auxiliary Reviewers

Gilles Bisson	Denise Gurer	Herve Mignot	Qi Zhang
Hendrik Blockeel	Reuven Karni	Giancarlo Ruffo	
Eric Bloedorn	Ken Kaufman	Michele Sebag	
Luc Dehaspe	Mark Maloof	Haleh Vafaie	

Additional copies of preprints of MSL-96 Proceedings, as well as MSL-91 and MSL-93 Proceedings, can be obtained from:

Administrative Assistant, Machine Learning and Inference Laboratory, M.S. 4A5
George Mason University, 4400 University Dr, Fairfax, VA 22030-4444, USA

Foreword

This volume contains papers presented at the Third International Workshop on Multistrategy Learning (MSL-96), held in Harpers Ferry, WV, May 23-25, 1996. The workshop was organized by the Machine Learning and Inference Laboratory at George Mason University, with the collaboration of the International Joint Conferences on Artificial Intelligence, Inc. Support for the workshop was provided by the National Science Foundation, Office of Naval Research and American Association for Artificial Intelligence.

The theme of the workshop, multistrategy learning, concerns theoretical and empirical issues in the development of learning systems that employ multiple inferential and/or computational strategies. The study of such systems draws upon the achievements in all other research subareas of machine learning, and constitutes a major new research challenge for this field. As humans are multistrategy learners, multistrategy learning has a natural connection to cognitive studies of learning, and provides an excellent opportunity for cross-fertilization of these two areas. Due to their versatility and the ability to integrate complementary strategies, multistrategy learning systems have a potential for solving more complex learning problems than monostrategy systems, which have so far been the main focus of machine learning research. Multistrategy learning workshops serve as a forum for presenting and discussing research progress in this area. MSL-96 is a sequel to the previous workshops, MSL-91 and MSL-93, also organized by the GMU Machine Learning and Inference Laboratory.

Papers in this volume present a sample of the recent research on multistrategy learning conducted at major research laboratories in Australia, Austria, Belgium, France, Germany, Italy, Japan, New Zealand, Poland, and the United States. This indicates a truly international research interest in this area. Major topics of the workshop include: the study of interrelationships among learning strategies and paradigms, cognitive models of learning and their relationships to methods and paradigms of machine learning, the development of multistrategy learning systems, and their practical applications. The papers have been grouped into four categories, according to their primary themes:

Theoretical Issues
Cognitive Models
Methods and Systems
Special Topics and Applications.

The organizers thank all of the individuals and organizations for making this workshop possible, in particular:

Larry H. Reeker, Program Director of the Knowledge Models and Cognitive Systems Program at the National Science Foundation, and Michael O. Shneier, Program Director of Artificial Intelligence at the Office of Naval Research, for their interest and support that was indispensable to the organization of this workshop.

Ray Perrault, President of the International Joint Conferences on Artificial Intelligence, Inc. for his interest and collaboration.

Carol Hamilton and Mike Hamilton from American Association for Artificial Intelligence, for their help in the preparation of the workshop proceedings.

Program Committee members John Anderson, Francesco Bergadano, Jaime Carbonell, Hugo De Garis, Luc De Raedt, Marie desJardains, Diana Gordon, Kenneth Haase, Heedong Ko, Yves Kodratoff, Stan Matwin, Doug Medin, Raymond Mooney, Stephen Muggleton, Michael Pazzani, Ashwin Ram, Lorenza Saitta, Claude Sammut, Jude Shavlik, Derek Sleeman,

Gheorghe Tecuci, and the auxiliary reviewers, Gilles Bisson, Hendrik Blockeel, Eric Bloedorn, Luc Dehaspe, Denise Gurer, Reuven Karni, Ken Kaufman, Mark Maloof, Herve Mignot, Giancarlo Ruffo, Michele Sebag, Haleh Vafaie, and Qi Zhang, for their careful and timely reviews of the submitted papers. Their assistance was essential for ensuring the high quality of the contributions.

Invited speakers Jaime Carbonell, Hugo De Garis, Luc De Raedt, Kenneth Haase, Larry Hunter, Doug Medin, Katharina Morik, Michael Pazzani, Paul Rosenbloom, Lorenza Saitta, Benjamin Smith, and Claude Sammut.

Abhay Kasera, Grant Manager at the GMU Machine Learning and Inference Laboratory, and Local Arrangements Chair, who so diligently directed and executed many organizational aspects of the workshop.

Eric Bloedorn, Ken Kaufman, Mark Maloof, Haleh Vafaie and Qi Zhang, Graduate Research Assistants in the GMU Machine Learning and Inference Laboratory, for skillfully handling many organizational chores. They were a great and reliable team, whose help cannot be overstated.

Yves Kodratoff, Stan Matwin and Gheorghe Tecuci for their contribution to the initiation and development of the Multistrategy Learning Workshop series.

Last but not least, our deep and special gratitude goes to the Defense Advanced Research Projects Agency, the National Science Foundation and the Office Naval Research for supporting research in the Machine Learning and Inference Laboratory. Their continuous support over the years has enabled us to develop a critical mass of researchers, and to build at George Mason University a research program in machine learning and inference. The MSL series of workshops is one of its byproducts.

We present these Proceedings to the reader with the hope that they will contribute in a meaningful manner to the dissemination of ideas and further progress in this highly challenging and important research direction.

Ryszard S. Michalski

Contents

I. Theoretical Issues

Multistrategy Learning: When, How and Why:	3
<i>Lorenza Saitta</i>	
Using Background Knowledge to Build Multistrategy Learners	11
<i>Claude Sammut</i>	
A Multistrategy Approach to Relational Knowledge Discovery in Databases	17
<i>Katharina Morik and Peter Brockhausen</i>	
Induction in Logic	29
<i>Luc De Raedt</i>	
Induction as Knowledge Integration.....	39
<i>Benjamin D. Smith and Paul S. Rosenbloom</i>	
Fusing the Results of Diverse Algorithms	53
<i>John F. Elder IV</i>	
Learning Synthesis Schemes in Intelligent Systems	57
<i>Lech Polkowski and Andrzej Skowron</i>	

II. Cognitive Models

The Basic Level and Privilege in Relation to Goals, Theories, and Similarity	71
<i>Douglas L. Medin, Elizabeth B. Lynch, John D. Coley, and Scott Atran</i>	
Coevolution Learning:	85
Synergistic Evolution of Learning Agents and Problem Representations	
<i>Lawrence Hunter</i>	
A Comparison of Action Selection Learning Methods.....	95
<i>Diana Gordon and Devika Subramanian</i>	
A Cognitive Modeling Approach to Learning of Ill-defined Categories	103
<i>Mukesh Rohatgi</i>	

III. Methods and Systems

Multistrategy Task-adaptive Learning Using Dynamically Interlaced Hierarchies:	115
A Methodology and Initial Implementation of INTERLACE	
<i>Nabil W. Alkharouf and Ryszard S. Michalski</i>	

Combining Symbolic and Numeric Methods for Learning to Predict Temporal Series	125
<i>Marco Botta and Attilio Giordana</i>	
An Empirical Study of Computational Introspection:	135
Evaluating Introspective Multistrategy Learning in the Meta-AQUA System	
<i>Michael T. Cox</i>	
From Instances to Rules: A Comparison of Biases	147
<i>Pedro Domingos</i>	
Multistrategy Learning to Apply Cases for Case-Based Reasoning	155
<i>David B. Leake, Andrew Kinley and David Wilson</i>	
Inductive Logic Programming + Stochastic Bias = Polynomial Approximate Learning	165
<i>Michele Sebag, Celine Rouveirol and Jean-Francois Puget</i>	
Theory Restructuring: Coarse-grained Integration of Strategies for Induction	177
and Maintenance of Knowledge Bases	
<i>Edgar Sommer</i>	
Decision Combination Based on the Characterization of Predictive Accuracy	191
<i>Kai Ming Ting</i>	
A Multistrategy Learning System for Planning Operator Acquisition	203
<i>Xuemei Wang</i>	
On-line Metalearning in Changing Contexts: METAL(B) and METAL(IB)	217
<i>Gerhard Widmer</i>	
Learning Weighted Prototypes Using Genetic Algorithms	229
<i>Jianping Zhang and Qiu Fan</i>	
 IV. Special Topics and Applications	
Revising User Profiles: The Search for Interesting Web Sites	239
<i>Daniel Billsus and Michael Pazzani</i>	
CAM-BRAIN: ATR's Billion Neuron Artificial Brain Project	251
<i>Hugo De Garis</i>	
Integrating EBL and ILP to Acquire Control Rules for Planning	271
<i>Tara A. Estlin and Raymond J. Mooney</i>	
Forecasting of Options in the Car Industry Using a Multistrategy Approach	281
<i>Stefan Ohl</i>	

How to Predict It: Inductive Prediction by Analogy Using Taxonomic Information	295
<i>Takashi Ishikawa and Takao Terano</i>	
Addressing Knowledge Discovery Problems in a Multistrategy Framework	305
<i>Kenneth Kaufman</i>	
Automated Extraction of Expert System Rules from Databases Based on Rough Set Theory	313
<i>Shusaku Tsumoto and Hiroshi Tanaka</i>	
Comparative Analysis of Amino-acid Sequences Based on Rough Set Theory	325
and Change of Representation	
<i>Shusaku Tsumoto and Hiroshi Tanaka</i>	
Application of Multistrategy Learning in Finance	333
<i>Martin Westphal and Gholamreza Nakhaeizadeh</i>	
Author Index	339
