PROCEEDINGS OF THE THIRD INTERNATIONAL WORKSHOP ON MULTISTRATEGY LEARNING (MSL-96)

Edited by

R. S. Michalski
J. Wnek

Harpers Ferry, WV, May 23-25, 1996.
Proceedings of the Third International Workshop on Multistrategy Learning

May 23-25
Harpers Ferry, WV

Edited by Ryszard S. Michalski and Janusz Wnek

Organized by the Machine Learning and Inference Laboratory
George Mason University with the collaboration of International Joint Conferences on Artificial Intelligence, Inc.

Sponsored by the National Science Foundation Office of Naval Research American Association for Artificial Intelligence
Organizing Committee
Ryszard S. Michalski, General Chairman
George Mason University
Janusz Wnek, Program Chairman
George Mason University

Program Committee
John Anderson, Carnegie Mellon University
Francesco Bergadano, University of Torino
Jaime Carbonell, Carnegie Mellon University
Hugo De Garis, ATR, Kansai Science City
Luc De Raedt, Catholic University of Leuven
Marie desJardins, SRI International
Diana Gordon, Naval Research Laboratory
Kenneth Haase, Massachusetts Institute of Technology
Heedong Ko, Korea Institute of Technology
Yves Kodratoff, University of Paris-South
Stan Matwin, University of Ottawa
Doug Medin, Northwestern University
Raymond Mooney, University of Texas at Austin
Stephen Muggleton, Oxford University
Michael Pazzani, University of California at Irvine
Ashwin Ram, Georgia Institute of Technology
Lorenza Saitta, University of Torino
Claude Sammut, University of New South Wales
Jude Shavlik, University of Wisconsin
Derek Sleeman, University of Aberdeen
Gheorghe Tecuci, George Mason University and Romanian Academy

Local Arrangements
Abhay Kasera
George Mason University

Auxiliary Reviewers
Gilles Bisson
Hendrik Blockeel
Eric Bloedorn
Luc Dehaspe
Denise Gurer
Reuven Karni
Ken Kaufman
Mark Maloof
Herve Mignot
Giancarlo Ruffo
Michele Sebag
Qi Zhang
Haleh Vafaie

Additional copies of preprints of MSL-96 Proceedings, as well as MSL-91 and MSL-93 Proceedings, can be obtained from:
Administrative Assistant, Machine Learning and Inference Laboratory, M.S. 4A5
George Mason University, 4400 University Dr, Fairfax, VA 22030-4444, USA

Foreword

This volume contains papers presented at the Third International Workshop on Multistrategy Learning (MSL-96), held in Harpers Ferry, WV, May 23-25, 1996. The workshop was organized by the Machine Learning and Inference Laboratory at George Mason University, with the collaboration of the International Joint Conferences on Artificial Intelligence, Inc. Support for the workshop was provided by the National Science Foundation, Office of Naval Research and American Association for Artificial Intelligence.

The theme of the workshop, multistrategy learning, concerns theoretical and empirical issues in the development of learning systems that employ multiple inferential and/or computational strategies. The study of such systems draws upon the achievements in all other research subareas of machine learning, and constitutes a major new research challenge for this field. As humans are multistrategy learners, multistrategy learning has a natural connection to cognitive studies of learning, and provides an excellent opportunity for cross-fertilization of these two areas. Due to their versatility and the ability to integrate complementary strategies, multistrategy learning systems have a potential for solving more complex learning problems than monostatgy systems, which have so far been the main focus of machine learning research. Multistrategy learning workshops serve as a forum for presenting and discussing research progress in this area. MSL-96 is a sequel to the previous workshops, MSL-91 and MSL-93, also organized by the GMU Machine Learning and Inference Laboratory.

Papers in this volume present a sample of the recent research on multistrategy learning conducted at major research laboratories in Australia, Austria, Belgium, France, Germany, Italy, Japan, New Zealand, Poland, and the United States. This indicates a truly international research interest in this area. Major topics of the workshop include: the study of interrelationships among learning strategies and paradigms, cognitive models of learning and their relationships to methods and paradigms of machine learning, the development of multistrategy learning systems, and their practical applications. The papers have been grouped into four categories, according to their primary themes:

- Theoretical Issues
- Cognitive Models
- Methods and Systems
- Special Topics and Applications.

The organizers thank all of the individuals and organizations for making this workshop possible, in particular:

Larry H. Reeker, Program Director of the Knowledge Models and Cognitive Systems Program at the National Science Foundation, and Michael O. Shneider, Program Director of Artificial Intelligence at the Office of Naval Research, for their interest and support that was indispensable to the organization of this workshop.

Ray Perrault, President of the International Joint Conferences on Artificial Intelligence, Inc. for his interest and collaboration.

Carol Hamilton and Mike Hamilton from American Association for Artificial Intelligence, for their help in the preparation of the workshop proceedings.

Program Committee members John Anderson, Francesco Bergadano, Jaime Carbonell, Hugo De Garis, Luc De Raedt, Marie desJardains, Diana Gordon, Kenneth Haase, Heedong Ko, Yves Kodratoff, Stan Matwin, Doug Medin, Raymond Mooney, Stephen Muggleton, Michael Pazzani, Ashwin Ram, Lorenza Saitta, Claude Sammut, Jude Shavlik, Derek Sleeman,
Gheorghe Tecuci, and the auxiliary reviewers, Gilles Bisson, Hendrik Blockeel, Eric Bloedorn, Luc Dehaspe, Denise Gurer, Reuven Karni, Ken Kaufman, Mark Maloof, Herve Mignot, Giancarlo Ruffo, Michele Sebag, Haleh Vafaie, and Qi Zhang, for their careful and timely reviews of the submitted papers. Their assistance was essential for ensuring the high quality of the contributions.

Abhay Kasera, Grant Manager at the GMU Machine Learning and Inference Laboratory, and Local Arrangements Chair, who so diligently directed and executed many organizational aspects of the workshop.

Eric Bloedorn, Ken Kaufman, Mark Maloof, Haleh Vafaie and Qi Zhang, Graduate Research Assistants in the GMU Machine Learning and Inference Laboratory, for skillfully handling many organizational chores. They were a great and reliable team, whose help cannot be overstated.

Yves Kodratoff, Stan Matwin and Gheorghe Tecuci for their contribution to the initiation and development of the Multistrategy Learning Workshop series.

Last but not least, our deep and special gratitude goes to the Defense Advanced Research Projects Agency, the National Science Foundation and the Office Naval Research for supporting research in the Machine Learning and Inference Laboratory. Their continuous support over the years has enabled us to develop a critical mass of researchers, and to build at George Mason University a research program in machine learning and inference. The MSL series of workshops is one of its byproducts.

We present these Proceedings to the reader with the hope that they will contribute in a meaningful manner to the dissemination of ideas and further progress in this highly challenging and important research direction.

Contents

I. Theoretical Issues

Multistrategy Learning: When, How and Why: ...................................................................................... 3
Lorenza Saitta

Using Background Knowledge to Build Multistrategy Learners .................................................... 11
Claude Sammut

A Multistrategy Approach to Relational Knowledge Discovery in Databases ................................. 17
Katharina Morik and Peter Brockhausen

Induction in Logic ................................................................................................................................. 29
Luc De Raedt

Induction as Knowledge Integration ..................................................................................................... 39
Benjamin D. Smith and Paul S. Rosenbloom

Fusing the Results of Diverse Algorithms ......................................................................................... 53
John F. Elder IV

Learning Synthesis Schemes in Intelligent Systems ............................................................................. 57
Lech Polkowski and Andrzej Skowron

II. Cognitive Models

The Basic Level and Privilege in Relation to Goals, Theories, and Similarity ...................................... 71
Douglas L. Medin, Elizabeth B. Lynch, John D. Coley, and Scott Atran

Coevolution Learning: ......................................................................................................................... 85
Synergistic Evolution of Learning Agents and Problem Representations
Lawrence Hunter

A Comparison of Action Selection Learning Methods ........................................................................... 95
Diana Gordon and Devita Subramanian

A Cognitive Modeling Approach to Learning of Ill-defined Categories .......................................... 103
Mukesh Rohatgi

III. Methods and Systems

Multistrategy Task-adaptive Learning Using Dynamically Interlaced Hierarchies: ......................... 115
A Methodology and Initial Implementation of INTERLACE
Nabil W. Alkharouf and Ryszard S. Michalski
Combining Symbolic and Numeric Methods for Learning to Predict Temporal Series .......... 125
Marco Bott and Attilio Giordana

An Empirical Study of Computational Introspection: ................................................. 135
Evaluating Introspective Multistrategy Learning in the Meta-AQUA System
Michael T. Cox

From Instances to Rules: A Comparison of Biases ......................................................... 147
Pedro Domingos

Multistrategy Learning to Apply Cases for Case-Based Reasoning ................................. 155
David B. Leake, Andrew Kinley and David Wilson

Inductive Logic Programming + Stochastic Bias = Polynomial Approximate Learning ...... 165
Michele Sebag, Celine Rouveirol and Jean-Francois Puget

Theory Restructuring: Coarse-grained Integration of Strategies for Induction .................. 177
and Maintenance of Knowledge Bases
Edgar Sommer

Decision Combination Based on the Characterization of Predictive Accuracy .................... 191
Kai Ming Ting

A Multistrategy Learning System for Planning Operator Acquisition ............................... 203
Xuemei Wang

On-line Metalearning in Changing Contexts: METAL(B) and METAL(IB) ...................... 217
Gerhard Widmer

Learning Weighted Prototypes Using Genetic Algorithms ............................................ 229
Jianping Zhang and Qiu Fan

IV. Special Topics and Applications

Revising User Profiles: The Search for Interesting Web Sites ..................................... 239
Daniel Billsus and Michael Pazzani

CAM-BRAIN: ATR’s Billion Neuron Artificial Brain Project ..................................... 251
Hugo De Garis

Integrating EBL and ILP to Acquire Control Rules for Planning .................................... 271
Tara A. Estlin and Raymond J. Mooney

Forecasting of Options in the Car Industry Using a Multistrategy Approach .................... 281
Stefan Ohl
How to Predict It: Inductive Prediction by Analogy Using Taxonomic Information ...........295
   Takashi Ishikawa and Takao Terano

Addressing Knowledge Discovery Problems in a Multistrategy Framework .................. 305
   Kenneth Kaufman

Automated Extraction of Expert System Rules from Databases Based on Rough Set Theory .... 313
   Shusaku Tsumoto and Hiroshi Tanaka

Comparative Analysis of Amino-acid Sequences Based on Rough Set Theory ................... 325
   and Change of Representation
   Shusaku Tsumoto and Hiroshi Tanaka

Application of Multistrategy Learning in Finance ..................................................... 333
   Martin Westphal and Gholamreza Nakhaeizadeh

Author Index .................................................................................................................. 339
